Subject: Re: Water level

L [REDACTED],
Please take time to check the pond level monitoring records on the website, thomaspond.org. You will see that adjustments to the stop logs have been made in the past few weeks. I was the monitor during the week of May 11; B [REDACTED] and I made two adjustments during that week alone. S [REDACTED]

I have not seen any adjustments to the boards at the dam for weeks. My road has standing water and the land next to the bank near my cottage is saturated. The current flow is not sufficient to bring the level to mitigate the current damage to my property let alone the years of damage and erosion due to TPIA's management of the dam.

We adjust the pond level according to the mandates of the management plan on a daily basis consistent with the current and forecast weather. The results will necessarily lag actual conditions but we as proactive as nature allows. B [REDACTED]

Water level has risen substantially over the last 2 weeks. Are you going to make an adjustment.
